1. Mission & Vision Statement

Vision Statement

The department's vision for the foreseeable future is to keep pace with the rapid developments in cybersecurity science and its applications in the department's curriculum. The aim is to graduate qualified and competent professionals in the field of cybersecurity who holds both undergraduate and postgraduate degrees. The department strives for excellence and leadership in cybersecurity education, profession and research at the regional and global levels. It also strives to effectively meet the needs of the community and the job market.

Mission Statement

To prepare professionals in the field of cybersecurity capable of leading, designing and developing various projects in both the academic and professional fields. This is achieved by providing an exceptional and high-quality program that focuses on the integration of scientific theories and practical training to promote the development of programs, applications and innovations in scientific research. The aim is to provide the necessary security services to individuals and public/private organizations in Iraq and contribute to the overall development of society.

2. **Program Specification**

| Programme code: | BSc-BIO | ECTS | 240 |
|-----------------|-----------------------|-----------------------|-----------|
| Duration: | 4 levels, 8 Semesters | Method of Attendance: | Full Time |

Cyber-attacks are a serious security issue facing organizations in the information age. Today, all organizations operate with a potential information security risk and will need to implement strategies to protect their information technology (IT) systems and data. Although society has become increasingly reliant upon IT and cloud-based services, cyber security skills and capability are not currently increasing at a comparable rate.

The Iraqi universities takes a prominent role in cyber security provision, with the demand for new talent only set to grow in the future. This growth requires a sustained supply of competent cyber security professionals who have achieved the requisite standards and certification.

The bachelor of Cyber Security program will provide students with a fundamental understanding of how to protect organizations, networks, IT systems and individuals against cyber-attacks and cyber threats. It will prepare them for the possibility of taking professional qualifications in their early career pathway, such as Cisco CCNA; Cisco CCNA Security; and CompTIA Security+.

The bachelor of Cyber Security program has been developed to provide a specific opportunity for students to enter an educational program in an increasingly vital subject area. The program is for those wishing to develop a career as a cyber security professional, or to develop new skill sets that may enable them to consider alternative employment roles within IT services.

Prospective students will be seeking to improve their technical understanding of cyber security, IT services and risk management, and how this relates to the wider business and customer-facing needs for their future employers. During the program students will learn the underpinning areas of software and networked systems as well as developing specialist skills in cyber security, risk and information management.

Students will also learn to use a wide range of cyber security related tools and techniques, alongside technical skills in computer programming, software engineering, cloud and database development.

Qualified cyber security professionals are currently in high demand by business, government and law enforcement agencies across the globe. Graduating students from the program will have gained the fundamental skills and knowledge necessary to quickly adopt the emerging technologies and concepts in this fast-changing field, alongside the professional and business skills, techniques and ways of thinking needed to be able to align technical security requirements with business needs.

3. Program Goals

The Department of Cybersecurity Science aims to keep pace with the rapid developments in the field of cybersecurity on a local and global level. The creation of this specialization is a response to the rapid development of digital transformation processes and the increased rates of electronic attacks as well as the risks of cyber system breaches. Therefore, the specialization aims to prepare a generation equipped with the necessary knowledge and skills to use various tools to detect security breaches and vulnerabilities and to address them by achieving the following educational objectives:

- 1. Graduates able to encrypt and obfuscate data in various programming languages to enhance the protection of organizations from any intrusion or cybersecurity threats.
- 2. Enable students to develop information security systems and software for both public and private sector organizations.
- 3. Apply strategies and technical skills to ensure the protection of data and information.
- 4. Study the commitment to ethical behavior in information security.
- 5. Apply the principles of scientific and methodological thinking to solve digital and cybersecurity information security problems and challenges.
- 6. Master the skills necessary to transition to a specialized phase in computer and information security.

4. **Student Learning Outcomes**

- 1. Help the student to develop secure programs and systems.
- 2. Enable the student to encrypt and analyze the source code of systems.
- 3. Enable the student to detect intruders in networks or computers as well as protect data and repositories from tampering and infiltration.
- 4. Helps students to complete simplified projects that demonstrate their understanding as well as applying it practically.

5. Academic Staff

Mohammed Abdul Jaleel Maktoof | Ph.D. in Artificial Intelligence | Lecturer Email: mohammed.maktof@turath.edu.iq

Mobile no.: 07711947544

Loai Alamro | Master in Information technology | Assistant Lecturer Email: <u>loai.alamro@turath.edu.my</u> Mobile no.: 07902398530

Ruqqaia Said | Ph.D. in Political Sciences | Assistant Prof. Email: 07714471595 Mobile no.: <u>ruqaya.saeed@turath.edu.iq</u>

Qais Y. Hatim | Dual Ph.Ds. in Operation Research And Industrial Engineering | Lecturer Email: <u>qais.yahya@turath.edu.my</u> Mobile no.: 07712429848

Sarmad Waleed | Master in Information technology | Assistant Lecturer Email: <u>sarmad.waleed@turath.edu.iq</u> Mobile no.: 07712075426

Mustafa Adil Fayez | Ph.D. in Data Sciences | Lecturer Email: <u>Mustafa.adil@turath.edu.iq</u> Mobile no.: 07741103334

6. Credits, Grading and GPA

Credits

Al-Turath University is following the Bologna Process with the European Credit Transfer System (ECTS) credit system. The total degree program number of ECTS is 240, 30 ECTS per semester. 1 ECTS is equivalent to 25 hrs student workload, including structured and unstructured workload.

Grading

Before the evaluation, the results are divided into two subgroups: pass and fail. Therefore, the results are independent of the students who failed a course. The grading system is defined as follows:

| | | GRADING SCHEME | | | | | | | | | |
|------------|------------------|---------------------|------------|---------------------------------------|--|--|--|--|--|--|--|
| | | جات | مخطط الدر- | | | | | | | | |
| Group | Grade | التقدير | Marks (%) | Definition | | | | | | | |
| | A - Excellent | امتياز | 90 - 100 | Outstanding Performance | | | | | | | |
| Success | B - Very Good | جيد جدا | 80 - 89 | Above average with some errors | | | | | | | |
| Group | C - Good | جيد | 70 - 79 | Sound work with notable errors | | | | | | | |
| (50 - 100) | D - Satisfactory | متوسط | 60 - 69 | Fair but with major shortcomings | | | | | | | |
| | E - Sufficient | مقبول | 50 - 59 | Work meets minimum criteria | | | | | | | |
| Fail Group | FX – Fail | راسب - قيد المعالجة | (45-49) | More work required but credit awarded | | | | | | | |
| (0 – 49) | F — Fail | راسب | (0-44) | Considerable amount of work required | | | | | | | |
| | | | | | | | | | | | |
| Note: | | | | | | | | | | | |

Number Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

Calculation of the Cumulative Grade Point Average (CGPA)

1. The CGPA is calculated by the summation of each module score multiplied by its ECTS,

all are divided by the program total ECTS.

CGPA of a 4-year B.Sc. degree:

CGPA = [(1st ^module score x ECTS) + (2nd ^module score x ECTS) +] / 240

7. Curriculum/Modules

| Code | Module | SSWL | USSWL | ECTS | Туре | Pre-request |

1. Overview

This catalogue is about the courses (modules) given by the program of Cyber Security Sciences to gain the Bachelor of Science degree. The program delivers (xx) Modules with (6000) total student workload hours and 240 total ECTS. The module delivery is based on the Bologna Process.

نظره عامه

يتناول هذا الدليل المواد الدراسية التي يقدمها برنامج علوم الامن السيبراني للحصول على درجة بكالوريوس العلوم. يقدم البرنامج (٤٠) مادة دراسية، على سبيل المثال، مع (٦٠٠٠) إجمالي ساعات حمل الطالب و ٢٤٠ إجمالي وحدات أوروبية. يعتمد تقديم المواد الدراسية على عملية بولونيا.

2. Undergraduate Courses 2023-2024

| Modu | le Aims, Learning Outcomes and Indicative Contents |
|---|---|
| | أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية |
| Module Objectives أهداف المادة الدر اسية | Gaining knowledge of programming languages offers valuable insights into various other domains and disciplines Acquiring proficiency in the effective and responsible utilization and administration of programming languages is crucial for managers and other professionals in today's interconnected global information-driven society. Learn that people must understand the components of programming language and how all of these components work together to bring value to an organization. We need to direct our attention to the role that programming languages play in today's interconnected global information society. The competitiveness of many companies relies significantly on the efficient utilization of information systems. Consequently, we need to consider the potential benefits and drawbacks that integrating information systems can bring to both businesses and society. what is a programming language ? A languge is a group of interrelated statement working together toward a common goal by accepting inputs and producing outputs in an organized transformation process why learing algorithm? why learn about loop type? forloop whileloop Why Learn about functions? Defining a Function, Calling a Function, Function Arguments(Call by value, Call by Reference) |
| Module Learning Outcomes مخرجات التعلم للمادة الدر اسية | Provide the student with the essential skills required to excel in the Python programming language. Python power users possess a comprehensive grasp of the language and can discern the most appropriate tools or functions for specific situations. Acquire crucial skills for working with both basic 'if' statements and nested 'if' statements. Gain essential skills for handling 'for' statements and nested 'for' statements, which are types of loops. Acquire proficiency in writing and utilizing the essential functions. |
| Indicative Contents المحتويات الإرشادية | Indicative content includes the following. |

| Principles of Python Language How can use Python program , entering of variable types , basic input/output statement, and type of operators. |
|--|
| IF TYPE If statement, nested if statement. LOOP TYPES |
| For loop,nested for loop ,while,do while . |
| Defining a Function, Calling a Function, Function Arguments(Call by value, Call by Reference) |
| |

| Learning and Teaching Strategies | | | | |
|----------------------------------|--|--|--|--|
| | استراتيجيات التعلم والتعليم | | | |
| Strategies | The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes and the lab, interactive tutorials, and by considering types of simple experiments involving some sampling activities that are interesting to the students. | | | |

| Student Workload (SWL) الحمل الدر اسي للطالب محسوب لـ ١٥ اسبو عا | | | | |

| Grading Scheme مخطط الدرجات | | | | | | | |
|--------------------------------|--|--|----------|---------------------------------------|--|--|--|
| Group | Group Grade التقدير Marks % Definition | | | | | | |
| | A – Excellent | امتياز | 90 - 100 | Outstanding Performance | | | |
| | B - Very Good | جید جدا 80 - 89 Above average with some erro | | Above average with some errors | | | |
| Success Group (50 - 100) | C – Good | ختر | 70 - 79 | Sound work with notable errors | | | |
| (50 - 100) | D - Satisfactory | متوسط | 60 - 69 | Fair but with major shortcomings | | | |
| | E – Sufficient | مقبول | 50 - 59 | Work meets minimum criteria | | | |
| Fail Group | FX – Fail | ر اسب (قيد المعالجة) | (45-49) | More work required but credit awarded | | | |
| (0 – 49) | F – Fail | راسب | (0-44) | Considerable amount of work required | | | |
| | | | | | | | |

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

| أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية | | | | |
| Module Objectives أهداف المادة الدراسية | This course aims at teaching students how to think mathematically. Students will learn a set of mathematical facts and techniques as well as some major discrete structures that related with | | | |

| | computers. They will also learn how to use these facts, techniques and discrete structures to design computer-based solutions for real life problems. | |
|---|--|--|
| Module Learning Outcomes مخرجات التعلم للمادة الدراسية | Developing the acquisition of some acquired skills from inflammation Everyday life. Developing mathematical skills (skills that help form mathematical sense) skills Estimation, mental calculation, judging the reasonableness of the results, etc.). Acquiring various methods of conducting operations. Develop the ability to seriously classify and collect numerous data, tabulate and read them representation and interpretation. | |
| Indicative Contents المحتويات الإرشادية | ✓ Self-learning skills ✓ Skills to work in a team ✓ Thinking skills with mathematical logic ✓ Report writing skills | |

| Learning and Teaching Strategies | | | | |

| Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدر اسية ونتائج التعلم والمحتويات الإرشادية | | | | |
|---|---|--|--|--|
| Module Objectives أهداف المادة الدر اسية | Understand Computer Organization: Explain the significance of computer organization in the context of computing systems and recognize its historical development. Central Processing Unit (CPU): Identify the key components of a CPU, describe the CPU instruction execution cycle, and utilize Python for simulating CPU behavior. | | | |
| | Memory Systems: Analyze memory hierarchy, comprehend memory organization and addressing modes, and create simulations of memory systems using Python. | | | |

| | Assembly Language Programming: Familiarize themselves with assembly language, particularly MIPS assembly, and develop proficiency in writing, debugging, and simulating assembly programs using Python. Input/Output (I/O) and Peripherals: Examine I/O organization, device controllers, and communication mechanisms, and simulate I/O operations using Python. Computer Arithmetic: Understand binary and floating-point arithmetic, explore arithmetic operations in the Arithmetic and Logic Unit (ALU), and implement basic arithmetic operations using Python. Software-Hardware Interface: Analyze the interface between software and hardware, interpret software instructions' execution on hardware, and conduct Python-based simulations of hardware interactions. |
|---|--|
| Module Learning Outcomes مخرجات التعلم للمادة الدر اسية | Explain the historical development and significance of computer organization. Describe the components of a CPU, including the ALU, control unit, and registers, and understand the CPU's instruction execution cycle. Create Python simulations to model CPU behavior. Define the memory hierarchy, address modes, and organization, and develop Python-based memory system simulations. Write, debug, and simulate assembly language programs, specifically in MIPS assembly, using Python. Simulate I/O operations and understand I/O organization and device communication mechanisms. Perform binary and floating-point arithmetic, implement basic arithmetic operations in Python, and comprehend the role of the ALU. Develop Python simulations to illustrate software-hardware interactions. |
| Indicative Contents المحتويات الإرشادية | Indicative content includes the following. Principles of about low level Programming How can Python program be used simulate low level programming. How Hardware interacts with software during operation The diffrencess between Processes How programming designers improve the performance. |

| Learning and Teaching Strategies | | | | |

| Week 2 | The importance of data security. Common security threats. | | | |
| Week 3 | Protecting Your Data: Passwords and creating strong ones. | | | |
| Week 4 | Securing your devices. Safe internet usage. | | | |
| Week 5 | Email and Social Media Safety: Recognizing phishing emails. | | | |
| Week 6 | Protecting social media accounts. Safe information sharing. | | | |
| Week 7 | Online Shopping and Banking: Secure online shopping practices. | | | |
| Week 8 | Protecting financial information. Safeguarding personal data | | | |
| Week 9 | Privacy and Personal Information: Identifying personal information. | | | |
| Week 10 | Privacy settings and online profiles. Risks of oversharing. | | | |
| Week 11 | Malware and Viruses: Understanding malware. | | | |
| Week 12 | Recognizing and avoiding malware. Introduction to antivirus software. | | | |

| Week 13 | Social Engineering and Scams: What is social engineering? | |
|---------|---|--|
| Week 14 | Common scams and how to avoid them. Reporting suspicious activities. | |
| Week 15 | Review and Final Assessment | |
| Week 16 | Exam | |

| Delivery Plan (Weekly Lab. Syllabus) | | | |
|--------------------------------------|--|--|--|
| | المنهاج الأسبوعي للمختبر | | |
| | Material Covered | | |
| | Lab 1: Orientation and Introduction to Encryption: Lab orientation, safety guidelines, and | | |
| Week 1 | expectations. | | |
| | Introduction to encryption concepts. | | |
| | Lab tool: VeraCrypt - Setting up encrypted containers. | | |
| Week 2 | Lab 2: Encryption Practices: Practical encryption exercises using VeraCrypt. | | |
| | Secure file storage and retrieval. | | |
| Week 3 | Lab 3: Access Control Configuration: Introduction to access control. | | |
| WCCK 5 | Lab tool: Windows Security Policies - Configuring access control lists (ACLs). | | |
| | Lab 4: User Authentication: | | |
| Week 4 | Implementing user authentication and access policies. | | |
| | Testing and validating access control measures. | | |
| | Lab 5 Threat Recognition and Response: | | |
| Week 5 | Understanding network traffic analysis. | | |
| | Lab tool: Wireshark - Analyzing network traffic for security threats. | | |
| | Lab 6: Simulated Incident Response: | | |
| Week 6 | Hands-on exercises in simulated incident response. | | |
| | Developing incident response plans. Simulating fixed-point and floating-point arithmetic. | | |
| | Lab 7: Security Tool Utilization (Part 1): | | |
| Week 7 | Lab tool: Wireshark - Advanced network traffic analysis. | | |
| | Identifying security incidents. | | |
| | Lab 8: Security Tool Utilization (Part 2): | | |
| Week 8 | Lab tool: Snort - Configuring and using intrusion detection. | | |
| | Responding to detected intrusions. | | |
| Week 9 | Lab9: Risk Assessment and Mitigation (Part 1): | | |

| | Introduction to vulnerability assessments. |
|---------|---|
| | Lab tool: Nessus - Scanning for vulnerabilities. |
| | Lab 10: Risk Assessment and Mitigation (Part 2): |
| Week 10 | Analyzing vulnerability scan results. |
| | Proposing security measures based on findings. |
| | Lab 11: Secure Communication: |
| Week 11 | Introduction to secure communication. |
| | Lab tool: GnuPG (GPG) - Configuring email encryption using GPG. |
| | Lab 12: Secure File Transfer: |
| Week 12 | Secure file transfer using GPG. |
| | Ensuring confidentiality and integrity. |
| | Lab 13: Final Project (Part 1): |
| Week 13 | Introduction to the final project. |
| | Project selection and planning. |
| | Lab 14: Final Project (Part 2): |
| Week 14 | Project work and implementation. |
| | Troubleshooting and finalizing project outcomes. |
| Week 15 | Lab15: Project Presentations and Course Conclusion |

| | أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية | | | | |
| Module Objectives أهداف المادة الدراسية | Developing communication approaches. Enhancing total physical response (TPR). Establishing multi-outcome learning (English and science knowledge for instance). | | | | |
| Module Learning Outcomes مخرجات التعلم للمادة الدراسية | The students will develop their abilities to speak, read and write. Connects language with body movements, allowing students to associate words and phrases with actions, making the learning process more engaging and memorable. Encourages active participation and problem-solving, fostering language | | | | |

| | acquisition in a meaningful context. |
|---------------------|---|
| | |
| | 4. motivates students by connecting language skills to their interests. |
| | 5. caters to different learning styles and enhances comprehension and retention. |
| | Part one – Reading: |
| | How to read (reading methods), predicting contents by using pictures in a text, |
| | skimming the text to get general ideas, scanning the text using headlines, extract |
| | meaning from content, making notes, searching to find information, linking ideas, |
| | getting information from websites, getting extra information from diagrams and |
| | pictures, using a topic sentences to help understanding, identifying the writer opinion, |
| | |
| | looking at data (tables, charts, and graphs), getting facts from text, using pronouns and |
| Indicative Contents | synonyms to avoid repetition, organizing notes, using student own knowledge to |
| Talà Mini a ti | understand the text, using references to understand a text, and using text and visuals |
| المحتويات الإرشادية | to understand statistics. |
| | |
| | Part two – Writing: |
| | Checking writing errors (in spelling, capital letters, punctuation, and grammar), |
| | enhancing handwriting, paragraphs (block and indented styles), linking ideas |
| | (sequencing words: first, after, then, finally,), greetings and endings, writing |
| | definitions, giving examples, avoiding repetitions, summarizing the main points of text, |
| | language to describe tables, charts, and graphs. |

| Learning and Teaching Strategies | | | | | |
|----------------------------------|---|--|--|--|--|
| | استراتيجيات التعلم والتعليم | | | | |
| Strategies | Emphasize real-life communication and provide opportunities for students to practice speaking, listening, reading, and writing in English through interactive activities such as discussions, role-plays, and group projects. Incorporate physical movement and actions to aid language acquisition. This approach connects language with body movements, allowing students to associate words and phrases with actions, making the learning process more engaging and memorable. Design tasks or projects that require students to use English to accomplish a specific goal. Integrate English language learning with subject-specific content, such as science or history, enabling students to learn English while gaining knowledge in other areas. Engage multiple senses (visual, auditory, kinesthetic) during instruction by incorporating visuals, multimedia, hands-on activities, and interactive technology. This approach caters to different learning styles and enhances comprehension and retention. | | | | |

| | أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية | | | | | |
| Module Objectives أهداف المادة الدر اسية | -Cognitive Goals 1. Upon Successful completion of this subject, students should : 2. Be able to use algebra accurately; 3. Be able to plot and interpret graphs 4. Be able to use exponential, logarithm, and trigonometric functions in applications; 5. Be able to calculate the sums of arithmetic and geometric series and use | | | | | |
| | them in simple financial calculations; 6. Be able to use basic rules of differentiation and calculate derivatives of simple functions; 7. Be able to use matrix in solving linear system of equations; | | | | | |

| | -Skill goals 1. Enable the student to refer the mathematical problem to a program and find a solution through the computer. 2. Student realization of the close relationship between mathematical problems and computer programs |
|---|---|
| Module Learning Outcomes مخرجات التعلم للمادة الدر اسية | Important: Write at least 6 Learning Outcomes, better to be equal to the number of study weeks. This subject is designed for students who enter university without a strong background in mathematics It is also for students who are planning to enroll in subjects requiring basic numeracy skills such as sciences, computing and information technology. The subject reinforces calculation skills, basic algebra . This subject is designed to work with formula. It is also to use applications of exponential and logarithmic functions. It is designed how applying matric to solve linear system of equations. |
| Indicative Contents المحتويات الإرشادية | Indicative content includes the following. Part A – Sequences and series <u>Sequence</u> is a function whose domain is the set of natural numbers. The terms of the sequence are the function values. There will be studied two types of sequences: arithmetic and geometric sequences with their partial sums. While series means that the infinite sum of geometric sequence. [12 hrs] Part B – Matrices Matrices are simply a rectangular array of numbers with m rows and n columns. There will be studied some: types of matrices, algebra of matrices. It is also studied how to find inverse of matrix, how to use matrix and its inverse to solve linear system of equations, how to find determinant of matrix and use it to solve linear system of equations. [12 hrs] Part C – Derivatives and integrals Derivatives mean that if $f: x \rightarrow y$ is a function, the derivative of a function f at a point x_0 written $f'(x_0)$; is given by $f'(x_0) = \lim_{x \rightarrow x_0} \frac{f(x) - f(x_0)}{x - x_0}$, If this limit exists and finite. There will be studied the derivatives of usual functions, implicit derivatives, derivatives of trigonometric functions, derivatives of exponential and logarithm functions. Graphical of exponential and logarithm functions. While integrals means that if $f(x)$ function defined at some interval, let $F(x)$ be another function such that F'(x) = f(x), F(x) called an infinite integral of $f(x)$ and is written as the following form $\int f(x) dx = F(x) + C.$ [12 hrs]. Part D – Interest Interest is the rental fee charged by a lender to a business or an individual for the use |

| of money . There will be studied simple and compound interests. Simple interest means that the interest is calculated <i>only once</i> for the entire time period of the loan. At the end of the time period, the borrower repays the principal plus the Interest . while compound interest means that means that the interest is calculated more than once during the time period of the loan. [9 hrs]. |

| | أهداف المادة الدر اسية ونتائج التعلم والمحتويات الإرشادية | | | | |
| Module Objectives أهداف المادة الدر اسية | Learn of programming languages provides added insight into other fields. Understanding the practical and responsible use and management of program language is important for managers and other business knowledge workers in today's global information Society. ensure the student understanded the components of programming language and how all of these components work together to bring value to an organization. | | | | |

| | 4. turn students attention to the role that programming language plays in global information Society.6. in this course we will cover basic concepts and techniques for programming including arrays and strings. |
|---|---|
| | 7. Why learn about loop types? Forloop. Whileloop. Do while loop. Nested loop. 8. Why learn about series? 9. Why learn about Shape? 10.Why learn about strings? 11. Why Learn about functions? Defining a Function, Function Declarations, Calling a Function, Function Arguments(Call by value, Call by Reference) 12. Why learn about Array? One and Two-dimensional array. |
| Module Learning Outcomes مخرجات التعلم للمادة الدر اسية | Give the student the most important skills to become a Python power users have a broad understanding of Python language and they know which tool or function is best used in a given situation. At the end of this course, students should be able to design, write and test a Python program to implement a working solution to a given problem. Learn the most important skills to deal with loop types, functions, strings |
| Indicative Contents المحتويات الإرشادية | Indicative content includes the following: <u>Principles of electronic</u> How can use a Python program, entering of variable types, basic input/output the statement, and type of operators. <u>Shapes</u> If statement, nested if statement, For loop, nested for loop, while, and do while. <u>Series</u> If statement, nested if statement, For loop, nested for loop, while, and do while. <u>Function</u> Defining a Function, Calling a Function, Function Arguments(Call by value, Call by Reference) <u>Strings</u> Declaration, String function, Array of string <u>Arrays</u> One-dimensional array Two-dimensional array |

| | استر اتيجيات التعلم والتعليم | | | | |
| Strategies | The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes and the lab, interactive tutorials, and by considering types of simple experiments involving some sampling activities that are interesting to the students. | | | | |

| Grading Scheme مخطط الدرجات | | | | |
|--------------------------------|-------------------------|---------------------|----------|---------------------------------------|
| Group | Grade | التقدير | Marks % | Definition |
| | A – Excellent | امتياز | 90 - 100 | Outstanding Performance |
| | B - Very Good | جيد جدا | 80 - 89 | Above average with some errors |
| Success Group (50 - 100) | C – Good | ختر | 70 - 79 | Sound work with notable errors |
| (50 - 100) | D - Satisfactory | متوسط | 60 - 69 | Fair but with major shortcomings |
| | E – Sufficient | مقبول | 50 - 59 | Work meets minimum criteria |
| Fail Group | FX – Fail | راسب (قيد المعالجة) | (45-49) | More work required but credit awarded |
| (0 – 49) | F – Fail | راسب | (0-44) | Considerable amount of work required |
| | | | | |

|---|---|--|--|--|
| أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية | | | | |
| | | | | |
| Module Objectives أهداف المادة الدراسية | This course contributes primarily to the students' knowledge for working professionally in these areas of logic design. Students should be able to apply knowledge of science and engineering, as well as the techniques, skills, and modern engineering tools to analyze, design and optimize logic circuits. In addition, this course provides a modern introduction to logical design and the basic building blocks used in digital systems, in particular digital computers. The students will be introduced to introductory logic design, their principle of operation, analysis, and design. In sum, they will learn how to use this knowledge more easily tailor the degree of technology coverage, accommodating both electrical and computer engineering and computer science audiences. | | | |
| Module Learning Outcomes مخرجات التعلم للمادة الدراسية | At the completion of the course, students will be able to: Using number systems and it applies to the material of logic systems. Be familiar with truth tables and how to use them for analysis and design. Using switching algebra and the implementation of switching functions using the common gates AND, OR, NOT, NAND, NOR, Exclusive-OR, and Exclusive-NOR. Simplification combinational logic circuits by using Karnaugh map. Analyze and design combinational larger logic circuits. Analyze sequential logic circuits. Ability to analyze and design a system, component, or process to meet desired needs. Ability to analyze, design and conduct experiments. In addition to the measurable student learning outcomes listed above, the students will be able to demonstrate their knowledge of the course material by Analyze real problems through laboratory experiments. | | | |
| | 1. Number systems | | | |
| Indicative Contents المحتويات الإرشادية | Positional number system. Binary digits(bits). Convert from binary to decimal. Decimal to binary. Hexadecimal (hex). Octal numbering systems. Converting between the four numbering systems (decimal, binary, Hex and octal). | | | |

| Fraction of number system. Signed and unsigned binary numbers. Two's complement, binary addition. Subtraction. Binary coded decimal (BCD) codes. ASCII code. Gray code. Combinational Logic Circuits and switching algebra. Properties of switching algebra. Development of a truth table. Manipulating algebraic functions. Sum of products (SOP). Product of sum (POS). Switching algebra and logic gates. Implementation of switching functions using networks of AND gates. OR gates. NOT gates. DeWorgan's theorem. From truth table to algebraic expression. Exclusive-OR gates Simplifying algebraic expressions. Consensus operator. Karnaugh map. Finding a minimum product of sums (POS) expression. Five and six-variable Karnaugh map. Finding a minimum product of sums (POS) expression. Five and six-variable Karnaugh map. Finding a minimum product of sums (POS) expression. Five and six-variable Karnaugh map. Economize by sharing gates. Design 1-bit and 2-bits full adder design 1-bit subtractor. Subtractor/ adder. Comparators. Binary encoder. Multiplexe and Demultiplexe. Analysis of sequential systems. J. K flip flops. flip flop with clear and present inputs, timing for flip flop. | | |
|--|------|---|
| Two's complement, binary addition. Subtraction. Binary coded decimal (BCD) codes. ASCII code. Gray code. Combinational Logic Circuits and switching algebra. Properties of switching algebra. Development of a truth table. Manipulating algebraic functions. Sum of products (SOP). Product of sum (POS). Switching algebra and logic gates. Implementation of switching functions using networks of AND gates. OR gates. NOT gates. DeMorgan's theorem. From truth table to algebraic expression. Exclusive-OR gates Simplifying algebrator. Karnaugh map. Two, three, and four-variable Karnaugh map. Finding a minimum product of sums (POS) expression. Five and six-variable Karnaugh map. Economize by sharing gates. Design 1-bit and 2-bits full adder design 1-bit subtractor. Subtractor/ adder. Comparators. Binary decoders. Binary decoders. Binary encoder. Multiplees and Demultiplexe. On p. S.R, T. J.K flip flops. | | Fraction of number system. |
| Subtraction. Binary coded decimal (BCD) codes. ASCII code. Gray code. Combinational Logic Circuits and switching algebra. Switching algebra. Properties of switching algebra. Development of a truth table. Manipulating algebraic functions. Sum of products (SOP). Product of sum (POS). Switching algebra and logic gates. Implementation of switching functions using networks of AND gates. OR gates. NOT gates. DeVologran's theorem. From truth table to algebraic expression. Exclusive-OR gates Simplifying algebraic expressions. Consensus operator. Karnaugh map. Two, three, and four-variable Karnaugh map. Finding a minimum product of sums (POS) expression. Five and six-variable Karnaugh map. Economize by sharing gates. Design 1-bit and 2-bits full adder design 1-bit subtractor. Subtractor/ adder. Comparators. Binary decoders. Binary decoders. Binary encoder. Multiplexe and Demultiplexe. Analysis of sequential systems. D, S-R, T. J-K flip flops. | | Signed and unsigned binary numbers. |
| Binary coded decimal (BCD) codes. ASCII code. Gray code. Combinational Logic Circuits and switching algebra. Switching algebra. Properties of switching algebra. Development of a truth table. Manipulating algebraic functions. Sum of products (SOP). Product of sum (POS). Switching algebra and logic gates. Implementation of switching functions using networks of AND gates. OR gates. NOT gates. DeMorgan's theorem. From truth table to algebraic expression. Exclusive-OR gates Simplifying algebraic expressions. Consensus operator. Karnaugh map. Two, three, and four-variable Karnaugh map. Finding a minimum product of sums (POS) expression. Five and six-variable Karnaugh map. Finding a minimum product of sums (POS) expression. Five and six-variable Karnaugh map. Economize by sharing gates. Design 1-bit and 2-bits full adder design 1-bit subtractor. Subtractor/ adder. Comparators. Binary decoders. Binary decoders. Binary encoder. Multiplexe and Demultiplexe. Analysis of sequential systems. D, S-R, T. J-K flip flops. | | Two's complement, binary addition. |

| Learning and Teaching Strategies استراتيجيات التعلم والتعليم | | |
|---|--|--|
| Strategies | The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises through class and laboratory experiments. The objective of this module is to serve as a cornerstone for the learning of logic design, digital system design, and computer design by students. At the same time, discussion of combinational logic: logic gates, minimization techniques, arithmetic circuits, and modern logic devices such as field programmable logic gates. This will be accomplished through group discussions, classes, reports, feedback, assignments, and interactive tutorials and by considering types of simple experiments, and exercises that are interesting to the students. | |

| Week 16 | Preparatory week before the final Exam | | | |

| | Delivery Plan (Weekly Lab. Syllabus) |
|---------|---|
| | المنهاج الاسبوعي للمختبر |
| | Material Covered |
| Week 1 | Introduction to Logic circuit design software and installation method. |
| Week 2 | Learning how to choose the appropriate software of in logic circuits design that are easy to use and have sustainability. |
| | Learning how to use interfaces of logic circuits design program. |
| | Introduction Logic Gates. |
| Week 3 | AND Gate and Logic Diagram. |
| | Examples with Exercises. |
| Week 4 | OR Gate and Logic Diagram. |
| Week 4 | Examples with Exercises. |
| Week 5 | NOT Gate and Logic Diagram. |
| Weeks | Examples with Exercises. |
| Week 6 | NAND Gate and Logic Diagram. |
| Weeko | Examples with Exercises. |
| Week 7 | NOR Gate and Logic Diagram. |
| WCCK / | Examples with Exercises. |
| Week 8 | XOR Gate and Logic Diagram. |
| Weeko | Examples with Exercises. |
| Week 9 | XNOR Gate and Logic Diagram. |
| WEEK 5 | Examples with Exercises. |
| Week 10 | Logic circuits and solving problems. |
| WEEK ID | Drawing the truth table from a given logic circuit. |

| | Designing a logic circuit from a given problem and testing it by also drawing a truth |
|---------|--|
| | table. |
| | Examples with Exercises. |
| | Boolean Algebra. |
| | Distributive Law. |
| Week 11 | Rules of Boolean Algebra. |
| | Boolean Expression/Function. |
| | Examples with Exercises. |
| | De Morgan's Theorems. |
| Week 12 | Examples: using Boolean Algebra techniques |
| Week 12 | Learn how to Work in groups. |
| | Examples with Exercises. |
| | Standard Form of Boolean Expressions |
| | All Boolean expressions, regardless of their form, can be converted into two standard forms: |
| Week 13 | The sum- of – products form. |
| | The product –of- sums form. |
| | Examples with Exercises. |
| Week 14 | How to construct Full -Adder from two Half –Adders with Logic circuit |
| | Examples with Exercises. |
| Week 15 | Exercises in general. |
| | Work in groups |
| Week 16 | Preparatory week before the final Exam through test students. |

| أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية | | | | |
| Module Aims أهداف المادة الدراسية | The aim of this course is to equip students with a strong foundation in cybersecurity principles and practices. By the end of the course, students will have a deep understanding of cybersecurity concepts, be able to recognize and mitigate common security threats, and appreciate the ethical and legal aspects of cybersecurity. | | | |

| | By the end of this course, students will: |
|--|--|
| Module Learning Outcomes | Understand Cybersecurity Fundamentals: Gain a strong foundation in cybersecurity principles, terminologies, and concepts. Identify Security Threats: Recognize common cybersecurity threats and vulnerabilities. |
| مخرجات التعلم للمادة الدراسية | Implement Security Measures: Learn practical strategies and tools to secure digital systems and networks. Analyze Security Incidents: Develop skills to investigate and respond to security incidents. Promote Cybersecurity Awareness: Understand the importance of cybersecurity in today's digital world and promote best practices. |
| Indicative Contents المحتويات الإرشادية | The indicative contents of the "Cyber Security Principles" course include an introduction to cybersecurity fundamentals, exploration of the cyber threat landscape, information security principles, network security, cryptography, access control and authentication, incident response, and legal and ethical considerations. These topics collectively provide students with a holistic understanding of cybersecurity concepts and practices. |

| Learning and Teaching Strategies | | | | | |
|----------------------------------|--|--|--|--|--|
| | استراتيجيات التعلم والتعليم | | | | |
| Strategies | The course employs a combination of teaching strategies, including lectures, interactive discussions, hands-on labs, and group projects. These strategies foster active engagement and practical application of cybersecurity principles, ensuring students grasp theoretical concepts while gaining valuable real-world experience. Additionally, guest lectures by industry experts and participation in cybersecurity-related events enhance students' exposure to current industry practices and challenges. | | | | |

|---------|--|
| | المنهاج الأسبوعي النظري |
| | Material Covered |
| Week 1 | Introduction to Cyber Security Definition and importance of cybersecurity. |
| Week 2 | Historical development and evolution of cyber threats. Ethical and legal considerations in cybersecurity. |
| Week 3 | Cyber Threat Landscape Types of cyber threats (e.g., malware, phishing, DDoS attacks). |
| Week 4 | Understanding threat actors and motivations. |
| Week 5 | Information Security Principles Confidentiality, integrity, and availability (CIA triad). |
| Week 6 | Security policies, standards, and guidelines. |
| Week 7 | Network Security Network security basics. |
| Week 8 | Firewalls, intrusion detection systems (IDS), and intrusion prevention systems (IPS). |
| Week 9 | Cryptography Principles of encryption and decryption. |
| Week 10 | Cryptographic algorithms and protocols. |
| Week 11 | Access Control and Authentication User authentication methods (e.g., passwords, multi-factor authentication). |
| Week 12 | Role-based access control (RBAC) and permissions. |
| Week 13 | Security Incidents and Response Identifying and responding to security incidents. |
| Week 14 | Developing an incident response plan. |
| Week 15 | Final Review and Examination |

Delivery Plan (Weekly Lab. Syllabus)

| | المنهاج الاسبوعي للمختبر |
|---------|---|
| | Material Covered |
| Week 1 | Lab1: Introduction to Lab Environment Setting up the lab environment |
| Week 2 | Lab 2: introduction to lab tools and resources. |
| Week 3 | Lab 3: Vulnerability Assessment (Aligned with Cyber Threat Landscape) Conducting vulnerability scans. |
| Week 4 | Lab 4: Identifying and prioritizing vulnerabilities. |
| Week 5 | Lab 5: Network Monitoring (Aligned with Network Security) Monitoring network traffic and anomalies. |
| Week 6 | Lab 6: Analyzing network logs and events. |
| Week 7 | Lab 7: Ethical Hacking (Aligned with Ethical Hacking) Introduction to ethical hacking. |
| Week 8 | Lab8: Performing ethical hacking exercises. |
| Week 9 | Lab9: Incident Response (Aligned with Security Incidents and Response) Developing an incident response plan. |
| Week 10 | Lab10: Identifying, analyzing, and mitigating security incidents. |
| Week 11 | Lab11: Security Solutions (Aligned with Security Solutions) Configuring and deploying security solutions (e.g., firewalls, intrusion detection systems). |
| Week 12 | Lab12: Conducting security assessments. |
| Week 13 | Lab13: Group Projects (Aligned with Various Topics) |
| Week 14 | Lab14: Collaborative group projects on cybersecurity scenarios. |
| Week 15 | Lab15: Final Lab Review and Assessment (Aligned with Final Review and Examination) |

| Module Aims | | | | |
| أهداف المادة الدراسية | The aim of this course is to equip students with a strong foundation in coding and information theory, enabling them to understand, analyze, and apply these concepts to enhance the security of digital data and communication. | | | |

| | By the end of this course, students will: |
|---|--|
| | By the end of this course, students will: |
| Module Learning Outcomes مخرجات التعلم للمادة الدراسية | Understand Information Theory: Explain the fundamental concepts of information theory, including information, entropy, and uncertainty, and their relevance to Cyber Security. Apply Error Detection and Correction: Implement error detection and correction techniques, including Hamming codes, parity, and cyclic redundancy checks (CRC), to ensure data integrity in digital communication. Implement Encryption and Decryption: Apply encryption and decryption algorithms, both symmetric and asymmetric, to secure digital data transmission and understand their role in data confidentiality. Manage Public Key Infrastructure (PKI): Describe the components of PKI, including digital certificates, key management, digital signatures, and trust models, and their importance in secure communication. Utilize Data Compression: Implement lossless and lossy data compression techniques such as Huffman coding and Run-Length Encoding (RLE) for efficient data storage and transmission. Apply Coding Theory in Cyber Security: Evaluate and apply coding and information theory principles in the context of Cyber Security, including secure key exchange and the establishment of secure communication channels. Practical Applications: Conduct hands-on exercises to implement encryption and decryption algorithms, analyze real-world case studies, and solve practical problems related to coding and information theory in Cyber Security. Assess Security Implications: Evaluate the role of coding and information theory in enhancing the security of digital information, communication systems, and cybersecurity practices. Critical Thinking: Develop critical thinking skills by analyzing and solving complex problems related to information theory and its applications in Cyber Security. Communication Skills: Effectively communicate technical concepts related to |
| | coding and information theory in both written and oral forms.1. Introduction to Information Theory: Understanding the principles of |
| | information, entropy, and uncertainty as foundational concepts. 2. Error Detection and Correction: Exploring error detection and correction codes, including Hamming codes and cyclic redundancy checks (CRC) for data integrity. 3. Cryptography Basics: Introduction to encryption and decryption techniques, |
| Indicative Contents المحتويات الإرشادية | encompassing symmetric and asymmetric encryption algorithms. Public Key Infrastructure (PKI): Examining PKI components, digital certificates, key management, and trust models in secure communication. |
| المحتويات الإرسادية | Data Compression: Implementing lossless data compression methods like Huffman coding and Run-Length Encoding (RLE) for efficient data storage and transmission. |
| | Coding Theory in Cyber Security: Applying coding and information theory to establish secure communication channels and secure key exchange. |
| | Practical Applications: Hands-on exercises, real-world case studies, and practical assignments reinforcing course concepts. |

| Learning and Teaching Strategies |
|----------------------------------|
| استراتيجيات التعلم والتعليم |

| Strategies | The course employs a multifaceted approach, combining lectures to introduce theoretical concepts, interactive discussions to stimulate critical thinking, practical labs for hands-on implementation, and real-world case studies to illustrate practical applications. Collaborative group projects and guest speakers from the industry enrich the learning experience, while self-study and problem-solving exercises foster independent learning and problem- solving skills among students. Continuous feedback and the use of technology enhance engagement and facilitate a comprehensive understanding of coding, encryption, and data security principles in the context of Cyber Security. |

| Module Aims, Learning Outcomes and Indicative Contents أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية | | | | |
|--|---|--|--|--|
| Module Objectives أهداف المادة الدراسية | Developing communication approaches. Enhancing total physical response (TPR). Establishing multi-outcome learning (English and science knowledge for instance). | | | |

| | 1. Improved Communication Skills: Students should be able to communicate |
|----------------------------------|---|
| | more effectively in English, expressing themselves with greater fluency and |
| | accuracy. They can participate in everyday conversations, express opinions, |
| | and discuss various topics. |
| | 2. Expanded Vocabulary: Learners should have developed a broader range of |
| | vocabulary, allowing them to understand and use a wider variety of words |
| | and expressions. |
| | 3. Grammar Proficiency: Students are expected to have a better grasp of |
| | English grammar, allowing them to construct more complex sentences and |
| | convey different tenses and aspects more accurately. |
| | 4. Reading Comprehension: Learners should be able to read and comprehend a |
| | variety of texts, such as articles, short stories, and excerpts from novels, with |
| Module Learning | a reasonable level of understanding. |
| Outcomes | 5. Writing Skills: Students should be able to write coherent paragraphs and |
| | short texts, such as emails, letters, and simple essays, demonstrating |
| مخرجات التعلم للمادة | improved sentence structure and organization. |
| مخرجات التعلم للمادة الدراسية | 6. Listening Skills: Learners should have developed better listening skills, |
| | allowing them to understand and follow conversations, interviews, and |
| | media in English with less difficulty. |
| | 7. Cultural Awareness: At this level, students may have been exposed to |
| | various cultural aspects of English-speaking countries, leading to a better |
| | understanding of cultural norms and customs. |
| | 8. Independent Learning: Students should be more confident and independent |
| | in their language learning journey, taking initiatives to practice and learn |
| | outside of the classroom. |
| | 9. Preparation for Advanced Levels: English Level II usually serves as a |
| | foundation for more advanced language courses. After completing this level, |
| | students should be ready to progress to higher-level language studies. |
| | |
| | International student: |
| | READING: Going abroad to study. |
| | Following instructions: filling in forms |
| | Reading methods: skim; scan; intensive reading; extensive reading |
| | WRITING: A host family |
| | Checking your writing: error correction - punctuation and spelling |
| Indicative Contents | Writing an informal email |
| | Where in the world: |
| المحتويات الإرشادية | READING: Three countries |
| | Skimming and scanning: reading for the general idea, and for particular information |
| | information |
| | WRITING: My country |
| | Brain storming ideas: topic areas and examples; |
| | completing a paragraph |
| | Linking ideas (1): but, however, although |

| Newspaper articles: |
|--|
| READING: An unexpected journey |
| Predicting content: using the title and the pictures |
| Meaning from context: guessing the meaning of new words |
| WRITING My country |
| Brainstorming ideas: topic areas and examples; completing a paragraph |
| • Linking ideas (1): but, however, although Writing a description of my country |
| Modern technology: |
| READING Innovation |
| Purpose and audience (1 an d 2): using visual and written clues |
| WRITING Mistaken identity |
| Sentences/Paragraphs; helping your writing flow |
| Varying the structure: making writing interesting Writing an article |
| Conferences and visits |
| READING: A conference in Istanbul |
| Purpose and audience (1 and 2): using visual and written clues |
| WRITING Invitations |
| Using formal expressions: writing academic emails and letters |
| Writing a formal email |
| Science and our world: |
| READING: Air pollution |
| Making notes: organizing recording, and remembering important |
| information |
| Interpreting meaning; recognizing fact and speculation |
| WRITING Technology - good or bad? |
| |
| Organizing ideas (1): planning the arguments for and against |
| Linking ideas (2): first, for instance, in conclusion Writing a discursive essay |
| People: past and present READING: Three famous writers |
| |
| Using original sources: dealing with difficult language and |
| unknown vocabulary |
| WRITING: Trends |
| Paraphrasing and summarizing: using other sources |
| Writing a summary |
| The world of IT: |
| READING: Computers |
| Rephrasing and explaining; dealing with difficult scientific and |
| technological words |
| Avoiding repetition (2): pronouns and what they refer to |
| WRITING: IT - benefits and drawbacks |
| Linking ideas (3): cause and result Coherent writing; writing up notes |
| Writing from notes |
| Inventions, discoveries, and processes: |
| READING: How things work |
| Intensive reading: strategies for focusing your reading |

| Linking ideas (4); sequencing words to describe a process |
|--|
| WRITING How things are made |
| The passive voice; writing in neutral style |
| Clarifying a sequence: describing a process |
| Writing a description of a process |
| Travel and tourism: |
| READING: International tourism |
| Interpreting data: statistical information in graphs, charts, and texts |
| VOCABULARY DEVELOPMENT Varying vocabulary (2) |
| A voiding repetition (3): describing graphs using synonyms, adjectives + |
| nouns, verbs + adverbs |
| |
| |

| Learning and Teaching Strategies | | | | | | |
|----------------------------------|--|--|--|--|--|--|
| استراتيجيات التعلم والتعليم | | | | | | |
| | For Teachers: | | | | | |
| | 1. Interactive and Communicative Approach: Encourage students to engage in | | | | | |
| | meaningful conversations, discussions, and role-plays. This approach | | | | | |
| | emphasizes real-life communication and helps students practice using English | | | | | |
| | in different contexts. | | | | | |
| | 2. Error Correction: Provide constructive feedback on students' errors without | | | | | |
| | discouraging them. Focus on correcting essential mistakes that hinder | | | | | |
| | communication while praising their efforts to build confidence. | | | | | |
| | 3. Contextual Learning: Use authentic materials like articles, videos, and short | | | | | |
| | stories to introduce new vocabulary and grammar in relevant contexts. This | | | | | |
| | helps students understand language usage in real-life situations. | | | | | |
| | 4. Task-Based Learning: Design activities and tasks that require students to use | | | | | |
| Strategies | English to complete meaningful projects or solve problems. This approach | | | | | |
| Strategies | fosters critical thinking and language application skills. | | | | | |
| | 5. Grammar in Context: Teach grammar points within the context of authentic | | | | | |
| | texts or dialogues. This helps students see how grammar functions in real | | | | | |
| | communication rather than just learning rules in isolation. | | | | | |
| | 6. Encourage Reading: Assign reading materials suited to the students' | | | | | |
| | proficiency level. Reading improves vocabulary, comprehension, and exposes | | | | | |
| | students to different writing styles. | | | | | |
| | 7. Listening Practice: Provide opportunities for listening exercises, such as | | | | | |
| | watching English-language videos, movies, or podcasts. This enhances | | | | | |
| | listening skills and exposes students to different accents and speech patterns. | | | | | |
| | 8. Writing Practice: Assign writing tasks like essays, emails, or short stories. | | | | | |
| | Provide feedback on their writing to improve their skills gradually. | | | | | |
| | For Students: | | | | | |

| 1. | Consistent Practice: Regularly practice reading, writing, listening, and |
|----|---|
| | speaking in English. Consistency is crucial for improvement. |
| 2. | Use Language Apps and Online Resources: Utilize language learning apps |
| | and online resources to reinforce learning, expand vocabulary, and improve |
| | grammar. |
| 3. | Join Language Exchange Groups: Engage in language exchange programs or |
| | groups where you can practice speaking English with native speakers or other |
| | learners. |
| 4. | Set Goals: Establish clear language learning goals and track your progress. |
| | Celebrate achievements and milestones. |
| 5. | Immerse Yourself: Surround yourself with English as much as possible. |
| | Watch English movies, TV shows, and listen to English music or podcasts. |
| 6. | Keep a Language Journal: Write down new words, expressions, and grammar |
| | rules you learn. Review and practice them regularly. |
| 7. | Practice with Different Media: Practice English through various mediums like |
| | reading books, watching documentaries, listening to news, or participating in |
| | online forums. |
| 8. | Be Patient and Persistent: Language learning takes time and effort. Stay |
| | motivated and persistent even if you encounter challenges |
| | |

| Grading Scheme | | | | | | |
|-----------------------------|-------------------------|---------------------|----------|---------------------------------------|--|--|
| مخطط الدرجات | | | | | | |
| Group | Grade | التقدير | Marks % | Definition | | |
| | A - Excellent | امتياز | 90 - 100 | Outstanding Performance | | |
| | B - Very Good | جيد جدا | 80 - 89 | Above average with some errors | | |
| Success Group (50 - 100) | C - Good | جيد | 70 - 79 | Sound work with notable errors | | |
| (50 - 100) | D - Satisfactory | متوسط | 60 - 69 | Fair but with major shortcomings | | |
| | E - Sufficient | مقبول | 50 - 59 | Work meets minimum criteria | | |
| Fail Group | FX – Fail | راسب (قيد المعالجة) | (45-49) | More work required but credit awarded | | |
| (0 – 49) | F – Fail | راسب | (0-44) | Considerable amount of work required | | |
| | | | | | | |

Note: Marks Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.

|--|--|--|--|--|--|
| أهداف المادة الدراسية ونتائج التعلم والمحتويات الإرشادية | | | | | |
| Module Aims | | | | | |
| أهداف المادة الدراسية 1. It gives the student a broader idea of the possibility of things happening . 2. The probability of things gives more opportunity for imagination. 3. The moment- generating function gives him more opportunity to deal with the derivative of the moment- generating function. | | | | | |

| | 4. The student will be qualified in the next stage to deal with probability and | | | |
|---|---|--|--|--|
| | statistics, especially in the subject of simulation . | | | |
| Modulo Loorning | | | | |
| Module Learning | | | | |
| Outcomes | 1. Understand the vocabulary of probability and statistics . | | | |
| | 2. Understanding the nature of statistics as an integrated system of knowledge. | | | |
| | 3. Developing student's statistical concepts. | | | |
| مخرجات التعلم للمادة الدراسية | 4. An attempt to reach the concepts of probability and statistics . | | | |
| الدراسية | 5. The ability to solve complex statistical problems. | | | |
| Indicative Contents المحتويات الإرشادية | Indicative content includes the following. Part A – permutations and combinations Permutations mean dealing with ordered things, but harmonics, the order is unimportant. Part B- Probability Probability is a measure of the possibility of an event occurring. Probability is measured as a number between zero and one, where zero indicates impossibility and one indicates certainty. The higher the probability of an event, the greater the possibility of that event occurring. Part C- Distributions Connected and discreet distributions and how to deal with them. | | | |

| Learning and Teaching Strategies استراتيجيات التعلم والتعليم | | | | |
|---|---|--|--|--|
| Strategies | Type something like: The main strategy that will be adopted in delivering this module is to encourage students' participation in the exercises, while at the same time refining and expanding their critical thinking skills. This will be achieved through classes, interactive tutorials and by considering type of simple experiments involving some sampling activities that are interesting to the students. | | | |
